

LIFEBOATS

We are India's foremost company who've been supplying, installing, and commissioning Lifeboat & Davit Systems to shipyards and offshore installations for more than 16 years. Our range comprises Lifeboats, Davits & Winches, and Release Gears of over 30 global manufacturers.

TOTALLY ENCLOSED LIFEBOAT

We offer totally enclosed lifeboats that are designed and tested in accordance with the latest IMO/SOLAS regulations and with new on-load release hooks approved according to resolution MSC.320 (89), and resolution MSC.321 (89), which are better secured against accidental release. They come in two versions, tanker or dry cargo.

FREE-FALL LIFEBOAT

A free-fall lifeboat is the fastest way of escaping from a vessel/platform in emergencies. They simply slide out from a ramp onboard and hit the water well away from the ship or installation with a high positive forward motion. These boats offered also comply with the latest IMO/SOLAS regulations and come in tanker and dry cargo versions.

PARTIALLY ENCLOSED LIFEBOAT

Partially enclosed lifeboats are used primarily on passenger vessels, cruise lines, and ferry operators where user friendliness and high boat capacity are priorities. Needless to say, they comply with the latest IMO/SOLAS regulations and come with new on-load release hooks as required by the IMO.
